DETAILED ACTION

Double Patenting

1. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

2. Claims 1-15 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-15 of prior U.S. Patent No. 6,693,276 B2. This is a double patenting rejection.

Claims 1-15 of the Application are identical to claims 1-15 of the Patent. The claims of both the Application and Patent disclose an apparatus and method for producing ion packages with a predetermined velocity using a system filled with damping gas consisting of coaxially arranged apertured diaphragms into which the ion beam is injected in line with the axis, and with consecutive phases of a low-frequency traveling field voltage applied to the diaphragms, wherein the low-frequency traveling field voltage consists of at least four consecutive phases and wherein a two-phase RF voltage is superimposed periodically on the phases of the traveling field voltage.
